

11. Cosmetics

11.1. YOUmeDERM® Care Products

Next to supply with chemicals **quartett** feels responsible for the health of its customers. Due to daily handling in the laboratory with gloves and aggressive substances, such as disinfectants or solvents, hands get dry and rough which is the basis for skin illnesses. Prevalence and incidence of skin illnesses increase each year. Since the hands are the most important tools in working life, the skin needs a special protection and care. Any moisture loss during work has to be replaced.

YOUmeDERM® Handlotion and **YOUmeDERM® Handbalm** are counted among the group of YOUmeDERM® care products. Both are natural products made of finest coconut butter and natural oils, such as sesame oil. The handmade care products enter perfectly the intercellular spaces between cornea cells and generate the barrier layer of the corneum stratum with its high content of phytosterol and linoleic acid. The skin's own rebuilding processes are stimulated, barrier as well as cornification disorders are prevented, and increased elasticity is provided. Containing tocopherol it is fighting free radicals, thus preventing the skin additionally. Both products protect stressed irritated hands against any moisture loss and leave a pleasant soft skin feeling. Combined with a light fragrance of bergamot YOUmeDERM® products create an oasis of regeneration for your hands.

11.2. Cosmetics Services and Support

quartett offers services and support in the fields of

- ▶ Development of innovative natural ingredients for cosmetic formulation
- ▶ Product development
- ▶ Process optimization
- ▶ Regulatory affairs
- ▶ Sample batch production
- ▶ Small-scale production

Support for development of natural ingredients is given with respect to regional plant specifics. Applications of plant ingredients deriving from natural sources occur in accordance with international cosmetic guidelines.

Support for product development is given for companies to identify their specific needs including support for patent applications and patent research. It comprises the complete process from the idea up to the final product ready for take over by marketing. First steps of product development contain thorough analyses of competitors, new trends, patent status, as well as project outline including complete project management. While product development is outlined the integration of marketing and sales aspects are central factors of the overall process.

Support for regulatory affairs is given on the basis of extensive up to date knowledge of the European as well as international cosmetic guidelines and safety certificates. Aspects of safety and regulations are included at the very first beginning to ensure maximum success of the newly developed product. Design and conduct of application studies in cooperation with renowned institutes are offered to meet marketing and patent claims.

Support is given for initial **sample batch production** as well as **small-scale production**.
